

Model comparison results

Christian McMillen • University of Virginia • March 2026

Overall extraction — % of Claude’s output on 3 benchmark documents

Fee patent extraction — the category that matters most for this research

+99

Additional named individuals found by Kimi whose dispossession is in the historical record

38%

Fine-tuning Llama made extraction worse, not better — the gap is about comprehension, not format

Corpus-wide synthesis — assembling evidence across hundreds of documents

23

Documents cited by Claude Opus answering one research question

2

Documents cited by Llama 4 Maverick on the same question

Optimal pipeline: Kimi extraction → Claude Opus analysis.

Widest evidence base interpreted with deepest analytical framing.
Neither model alone achieves what the combination produces.
